ML200SE Series
2W, Single Output Ultra-Miniature SMT DC/DC Converters

Key Features:
• 2W Output Power
• Ultra-Miniature SMT Case
• High Efficiency
• 1,500 VDC Isolation
• Single Output
• -40°C to +105°C Operation
• >3.5 MHour MTBF
• 17 Standard Models
• Tape & Reel Available
• LOW COST!

Electrical Specifications
Specifications typical @ +25°C, nominal input voltage & rated output current, unless otherwise noted. Specifications subject to change without notice.

</tbody>
</table>

Notes:
1. Output load regulation is specified for a load change of 10% to 100%.
2. When measuring output ripple, it is recommended that a 1 µF capacitor and a 10 µF capacitor be placed in parallel from the +Vout pin to the -Vout pin.
3. Units must be restarted after a short circuit fault.
4. The recommended reflow settings are given below.
5. It is recommended that the minimum output load should be at least 10%. Continuous operation below this level could damage the unit.
6. These converters are specified for operation without external components. However, in some applications the addition of input/output capacitors will enhance stability and reduce output ripple. The simple connection shown on page 3 will typically meet EN 55022 Class B.
7. The model ML215S-05E has not been tested to CE standards.
8. It is recommended that a fuse be used on the input of a power supply for protection. See the Model Selection table above for the correct rating.

Derating Curve

Reflow Solder Settings

The ML200SE series is designed to meet the IPC/JEDEC standard J-STD-020D.1 for reflow soldering. The recommended reflow settings are a peak temperature of 245 °C for a maximum period (TPK) of 10S and a time above liquidous (TL) of ≤60 seconds at 217 °C, as illustrated at left.

For more information, please contact the factory.
Simple Connection

![Simple Connection Diagram]

The diagram above illustrates a simple connection of the ML200SE series. For applications that do not require the circuit to meet EMi/EMC specifications, the capacitors C1, and C3 will reduce input/output ripple and improve the converter stability over time and temperature. The recommended component values are given in the table at right.

Typical Connection

![Typical Connection Diagram]

The diagram above illustrates a typical connection of the ML200SE series for an application that requires compliance to EMi/EMC standards EN 55032 and EN 61000-4 (as specified on page 1). Some notes on these components are:

1. An external fuse is recommended to protect the unit in the event of a fault on the input line. A recommended value is given in model selection table on page 2.
2. The output filtering capacitor (C3) is a high frequency, low resistance electrolytic capacitor. Care must be taken in choosing this capacitor not to exceed the capacitive load specification for the unit. Voltage derating of capacitors should be 80% or above.
3. Suggested component values are:

<table>
<thead>
<tr>
<th>Component</th>
<th>C1</th>
<th>C2</th>
<th>L1</th>
<th>C3</th>
<th>Cy</th>
</tr>
</thead>
<tbody>
<tr>
<td>VIN: 5V, 12V, 15V</td>
<td>4.7μF/50V</td>
<td>4.7μF/50V</td>
<td>6.8μH</td>
<td>See C3 in Table Above</td>
<td>1 nF/2 kV</td>
</tr>
<tr>
<td>VIN: 24V</td>
<td>4.7μF/50V</td>
<td>4.7μF/50V</td>
<td>6.8μH</td>
<td>---</td>
<td>---</td>
</tr>
</tbody>
</table>

4. In many applications, simply adding input/output capacitors will enhance the input surge protection & and reduce output ripple sufficiently. In this case, capacitors C1 and C3 could be connected as shown in the simple connection above, without the other filter components. Recommended capacitor values are given in the table above.
